Abstract. The international community is becoming an indivisible community with a shared future for mankind. In the face of global ecological problems, no country can stay aloof. "Adhering to the harmonious coexistence of man and nature" and "Adhering to promoting the building of a community with a shared future for mankind" are the two basic strategies of socialism with Chinese characteristics for the new era. From the different dimensions of ecological civilization, including ecological economy, ecological politics, ecological culture, this paper studies the community with a shared future for mankind and proposes the construction path of the community with a shared future for mankind from the perspective of ecological civilization.

Introduction

Human beings are in the process of industrial civilization, in which the accumulation of material wealth of human beings has been greatly improved. However, the ecological problems are increasingly prominent, and the ecological environment situation is very serious, which has seriously threatened the survival and sustainable development of human beings. For this, we must take seriously, strengthen zoology civilization construction. In the process of national construction and social development, we must pay attention to the construction of ecological civilization, ecological civilization as the top priority of the current work.

With the continuous progress and development of China's society, China has entered a new era. "Adhering to the harmonious coexistence of man and nature" and "Adhering to promoting the building of a community with a shared future for mankind" are the two basic strategies of socialism with Chinese characteristics for the new era. A community with a shared future for mankind means that while pursuing its own interests, all countries should respect the legitimate interests of other countries and realize the development of a community with a shared future for all countries. A community with a shared future for mankind is not only a political proposition, but also a new stage in the history of human development and a new direction for the development of human civilization. Building a community with a shared future for mankind is a Chinese wisdom solution to global problems. It is based on the reality of the contemporary global ecological crisis and the inheritance and development of Marxist theory and traditional Chinese culture\textsuperscript{[1]}.

The concept of ecological civilization and the community with a shared future for mankind are the crystallization of China's wisdom in exploring the relationship between man and nature and in the course of human development, reflecting the wisdom of the Chinese people. Ecological civilization and building a community with a shared future for mankind are closely related. As an inherent requirement for building a community with a shared future for mankind, a sound ecological environment is conducive to the construction and maintenance of a community with a shared future for mankind. As a practical practice of ecological civilization construction, building a community with a shared future for mankind is conducive to improving the relationship between man and nature, and further improving the quality and level of ecological civilization construction by promoting sustainable development of human society.
The Three Levels of the Community with a Shared Future for Mankind

Ecological Economic Level
Global economic development is constrained by the limits of the ecosystem and is a community with a shared future\cite{2}. The process of economic globalization continues to advance, which not only brings broad market and reasonable production structure to the world economy, but also makes the economic activities of human beings worldwide. In the context of economic globalization and increasing economic activities, human productivity has increased dramatically. However, the increase of such productivity is premised on excessive consumption of natural resources. The earth's natural resources are finite, and this over-consumption of natural resources is unsustainable. The exhaustion of natural resources will have a serious negative impact on human economic activities, and even the survival and security of human beings are difficult to be guaranteed.

Ecological economy in ecological civilization emphasizes that human economic activities must be moderate, which is mainly reflected in the choice and use of energy to ensure sustainability. Pay more attention to saving and low carbon when using energy; In terms of science and technology, developed countries should provide technical support to developing countries and underdeveloped countries to improve the utilization rate of energy and ensure the sustainability of energy. Therefore, from the perspective of ecological civilization, a community with a shared future for mankind at the ecological and economic level requires that while meeting their own development needs, mankind should apply clean energy, save energy, provide clean energy through scientific and technological research and learning, and realize the sustainability of human economic activities.

Ecological Political Level
Traditional politics believes that the relationship between countries is a kind of competitive relationship, and between countries is a zero-sum game. In order to protect their own national interests, they must sacrifice the national interests of other countries. Different from the traditional political, ecological civilization in the ecological politics is a partnership between countries, think human destiny together fitness will unite every subject in the international politics, a community with a shared future for mankind is one of the main international political cooperation political basis, advocating respect and safeguard the legitimate interests of the majority.

As a new development concept, "A community with a shared future for mankind" is being recognized by more and more countries in the world\cite{3}. Ecological politics in ecological civilization is committed to forming cooperative relations between countries, resolving conflicts and dealing with international affairs and global issues on the basis of cooperation. In many international relations, the ecological politics of ecological civilization holds that the relationship between great powers is the core of international relations. Therefore, from the perspective of ecological civilization, a community with a shared future for mankind at the ecological political level should attach importance to the good relations between major countries and create a good international political environment.

Ecological Culture Level
In the forest of world cultures, each culture influences the other, and no culture can exist independently from other cultures. The integration of various cultures makes culture adapt to the requirements of The Times, develops new connotation of The Times and constantly increases cultural vitality. As a specific cultural system, ecological culture has its unique function and structure\cite{4}. Ecological culture in ecological civilization pursues continuous renewal and integration of culture. In the process of interaction with other cultures, it maintains cultural vitality and inherits excellent culture.

Due to the relative independence of culture, local culture, based in the forest of world culture, will inevitably have some conflicts and contradictions with other cultures. However, the ecological cultural identity in ecological civilization makes the community with a shared future for mankind become a common value, which can alleviate the conflicts and contradictions among different cultures. Therefore, from the perspective of ecological civilization, the ecological cultural level of
the community with a shared future for mankind emphasizes that the community with a shared future for mankind, as a cultural value and a specific value system, represents the forward direction of the world's advanced culture.

A Three-dimensional Approach to Building a Community with a Shared Future for Mankind

Promote Industrial Ecology

Industrial ecology refers to the close integration of industry and ecology within the limited and safe carrying capacity of the natural environment, and the coordination and optimization of industry and ecology. Industrial ecology points to the direction of resource utilization and ecological protection. Advancing the industrial ecology requires the industrial ecology as the premise, and the development of the industry with the smallest resources, and it will produce greater ecological and economic value. While promoting the industrial ecology, we must also make a good ecological environment an ecological resource for the development of tourism and other industries, and provide economic viability for the protection of ecological resources and provide a strong material guarantee.

Build a New Type of International Relations

With the deepening development of globalization, countries all over the world interact, interact and rely on each other among countries, nations and individuals. The international political landscape is changing and becoming more complex. Under the influence of traditional international political concepts, relations between countries place more emphasis on competition, and the realization of national interests must sacrifice the interests of other countries. Such zero-sum game is frequently staged in international exchanges, which is not conducive to the development of all countries in the world. Therefore, to build a community with a shared future for mankind from the perspective of ecological civilization, we need to build a new type of international relations featuring mutual respect, fairness and justice, and win-win cooperation.

The new type of international relations is closely related to the community with a shared future for mankind. A community with a shared future for mankind will also provide relevant guidance and practical guidance for the building of a new type of international relations and facilitate the formation of a new type of international relations.

Establish an Ecological Cultural Exchange Mechanism

The ecological cultural exchange mechanism must be based on the consensus of ecological culture. Ecological cultural exchange mechanism mainly includes three aspects of content: The first is to establish and improve the system of ecological cultural exchange; The second is to strengthen ecological culture, training of personnel by taking college visits, student exchanges, learning theory and practice of different ecological culture, strengthen the understanding and using of ecological culture, continuous transmission of ecological culture to ecological culture communication talent; The third is to improve the ability to spread ecological culture, through improving the ability to spread ecological culture to the whole world, to all mankind.

China's Enlightenment on Building a Community with a Shared Future for Mankind from the Perspective of Ecological Civilization

Committed Chinese Path to Building a Community with a Shared Future for Mankind

From the perspective of ecological civilization, Chinese path of building a community with a shared future for mankind is a road of sustainable development, which pays attention to the protection of ecological environment on the premise of ensuring normal production activities of human beings. While realizing the sustainable industrial ecology, we should also pay attention to the sustainable ecological industry. China adheres to its own path in light of its actual conditions and taking into account the situation of the world's ecological environment. In order to build a community with a
shared future for mankind from the perspective of ecological civilization, we must stick to the Chinese path and not be disturbed by external forces or other influential factors.

**Contribute Chinese Wisdom to Building a Community with a Shared Future for Mankind**

To contribute Chinese wisdom to building a community with a shared future for mankind from the perspective of ecological civilization is to spread Chinese wisdom to the world and share Chinese wisdom with the world. Solving the world's ecological problems is a complex and lengthy process involving vested interests and redistribution of resources of some countries and groups. In this process, a systematic and dialectical thinking is needed to deal with possible problems. As the wisdom of the Chinese nation, Chinese wisdom has withstood the test of history and been further tested in reality. It plays a theoretical guiding role in the process of building a community with a shared future for mankind.

**Provide Chinese Plan to Build a Community with a Shared Future for Mankind**

To build a community with a shared future for mankind from the perspective of ecological civilization, the Chinese plan put forward by China requires the country and society to realize green and ecological development. Providing climate-friendly technology support to other countries in need; China will cooperate with other developing countries in low-carbon demonstration, mitigation and response to climate change, and establish the China South-South Cooperation Fund on climate change. Under the UN framework, China will continue to promote international cooperation in clean energy, ecological protection and low-carbon smart city construction.

The Chinese plan provides a platform for the exchange of experience and practice in world ecological governance, promotes the progress and development of the world, and demonstrates to the world that China actively assumes international obligations and is willing to contribute to world ecological construction. All countries should, within the framework of global governance for ecological civilization, address and address global ecological security issues in a unified way, share experience and achievements in governance, and work together to build a community with a shared future for mankind, achieve sustainable development of human society and build a beautiful ecological homeland for mankind.
